

**Amendments to the Claims**

Please amend Claims 2 and 24, as follows:

1. (Canceled)
2. **(Currently Amended)** A computer-implemented method comprising:  
managing enterprise data, wherein said managing enterprise data comprises  
receiving first data in a first format from a first source system;  
receiving second data in a second format from a second source system, wherein  
the second format is distinct from the first format;  
storing the first data and the second data in an intermediate format, wherein  
the intermediate format is defined by a plurality of common objects  
**configured to pass data from the first and second source  
systems to a target system.**  
the intermediate format comprises a schema defining a plurality of  
common data type elements accessible by each of the plurality of  
common objects,  
a data element defined by one of the common data type elements has a  
consistent structure in each common object using that data  
element,  
**each common data type element is a reusable data structure that can  
be referenced by other intermediate data structures,** and  
said storing comprises mapping the first data and the second data to the  
intermediate format using one or more of the common data type  
elements; and  
providing the stored first data and second data to **the** **[[a]]** target system in a target  
format.
3. (Previously Presented) The method of Claim 2, wherein the common data type  
elements comprise one or more elements comprising:

- an application element;
- a fault handler input element;
- a fault handler output element;
- a fault transformer input element;
- a fault transformer output element;
- a list of application instance element;
- a list of application type element;
- a list of ID cross-reference element;
- a list of ID cross-reference data element;
- a list of message definition element;
- a list of message text element;
- a list of value cross-reference element;
- a list of value cross-reference data element;
- a message element;
- a message set element;
- an activity type element;
- an address type element;
- an alternate ID type element;
- a communication data type element; and
- a data cleansing data type element.

4. (Previously Presented) The method of Claim 3, wherein the application element comprises one or more elements comprising:

- an application instance name element;
- an application type name element; and
- an application instance description element.

5. (Previously Presented) The method of Claim 3, wherein the fault handler input element comprises one or more elements or sub-elements comprising:

- an error type element;
- an error language element;

- an error severity element;
- an error flow name element;
- an error flow context element;
- a process name element;
- a message set element;
- a plurality of message text sub-elements; and
- a plurality of child message set sub-elements.

6. (Previously Presented) The method of Claim 3, wherein the fault handler output element comprises a message text element.

7. (Previously Presented) The method of Claim 3, wherein the fault transformer input element comprises one or more elements or sub-elements comprising:

- an error type element;
- an error language element;
- an error severity element;
- an error flow name element;
- an error flow context element;
- a process name element;
- a message set element;
- a plurality of message text sub-elements; and
- a plurality of child message set sub-elements.

8. (Previously Presented) The method of Claim 3, wherein the fault transformer output element comprises a message text element.

9. (Previously Presented) The method of Claim 3, wherein the list of application instance element comprises one or more elements or sub-elements comprising:

- a plurality of application instance definition elements;
- an application instance name sub-element;
- an application type name sub-element;
- an application instance description sub-element;

- a list of one-to-many ID cross-reference sub-element;
- a plurality of ID cross-reference sub-elements;
- an ID cross-reference name sub-element; and
- an ID cross-reference description sub-element.

10. (Previously Presented) The method of Claim 3, wherein the list of application type element comprises one or more elements or sub-elements comprising:

- a plurality of application type elements;
- an application type name sub-element; and
- an application type description sub-element.

11. (Previously Presented) The method of Claim 3, wherein the list of ID cross-reference element comprises one or more elements or sub-elements comprising:

- a plurality of ID cross-reference elements;
- an ID cross-reference name sub-element; and
- an ID cross-reference description sub-element.

12. (Previously Presented) The method of Claim 3, wherein the list of ID cross-reference data element comprises one or more elements or sub-elements comprising:

- a plurality of ID cross-reference elements;
- a plurality application instance sub-elements; and
- a plurality application ID sub-elements.

13. (Previously Presented) The method of Claim 3, wherein the list of message definition element comprises one or more elements or sub-elements comprising:

- a plurality of message definition elements;
- a message code sub-element;
- a message description sub-element;
- a message corrective action sub-element; and
- a message argument name sub-element.

14. (Previously Presented) The method of Claim 3, wherein the list of message text element comprises a plurality of message text elements.

15. (Previously Presented) The method of Claim 3, wherein the list of value cross-reference element comprises one or more elements or sub-elements comprising:

- a plurality of value cross-reference elements;
- a value cross-reference name sub-element; and
- a value cross-reference description sub-element.

16. (Previously Presented) The method of Claim 3, wherein the list of value cross-reference data element comprises one or more elements or sub-elements comprising:

- a plurality of value cross-reference elements;
- a plurality application type sub-elements; and
- a plurality application value sub-elements.

17. (Previously Presented) The method of Claim 3, wherein the message set element comprises one or more elements or sub-elements comprising:

- a plurality of message text elements; and
- a plurality of child message set elements.

18. (Previously Presented) The method of Claim 3, wherein the activity type element comprises one or more elements or sub-elements comprising:

- an activity published code element;
- an activity comment element;
- an activity duration element;
- an activity end date element;
- an activity number element;
- an activity reason code element;
- an activity start date element;
- an activity task description element;
- an activity type code element;
- an activity planned duration sub-element;

- an activity actual duration sub-element;
- an activity actual date sub-element;
- an activity actual time sub-element;
- an activity planned date sub-element; and
- an activity planned time sub-element.

19. (Previously Presented) The method of Claim 3, wherein the address type element comprises one or more elements or sub-elements comprising:

- a plurality of address line elements;
- an address city element;
- an address state code element;
- an address county element;
- an address province element;
- an address country code element;
- an address house number element;
- an address house prefix element;
- an address house suffix element;
- an address postal code element;
- an address street direction element;
- an address street name element;
- an address street number element;
- an address street prefix number element;
- an address street prefix type element;
- an address street suffix element;
- an address thoroughfare element;
- an address list of location designator element;
- a plurality of address location designator sub-elements;
- an address location designator name sub-element; and
- an address location designator value sub-element.

20. (Previously Presented) The method of Claim 3, wherein the alternate ID type element comprises one or more elements comprising:

- an ID element; and
- an ID type element.

21. (Previously Presented) The method of Claim 3, wherein the communication data type element comprises one or more elements or sub-elements comprising:

- a list of phone number element;
- a list of email element;
- a list of web page element;
- a custom communication data element;
- a phone number sub-element;
- an email sub-element;
- a web page sub-element;
- a phone number area code sub-element;
- a phone number country code sub-element;
- a phone number full number sub-element;
- a phone number extension sub-element;
- a phone number international access code sub-element;
- a phone number number sub-element;
- a phone number type code sub-element;
- an email type sub-element;
- an email address sub-element;
- a web page type sub-element; and
- a web page address sub-element.

22. (Previously Presented) The method of Claim 3, wherein the data cleansing type element comprises a disable cleansing flag element.

23. (Canceled)

24. **(Currently Amended)** A computer-readable storage medium comprising:  
 one or more sequences of instructions, wherein the one or more sequences of instructions  
 are configured to cause a processor to  
 manage enterprise data, by virtue of being configured to cause the processor to  
 receive first data in a first format from a first source system,  
 receive second data in a second format from a second source system  
 wherein the second format is distinct from the first format,  
 store the first data and the second data in an intermediate format wherein  
 the intermediate format is defined by a plurality of common  
 objects configured to pass data from the first and second  
 source systems to a target system,  
 the intermediate format comprises a schema defining a plurality of  
 common data type elements accessible by each of the  
 plurality of common objects,  
 a data element defined by one of the common data type elements  
 has a consistent structure in each common object using that  
 data element,  
each common data type element is a reusable data structure  
 that can be referenced by other intermediate data  
 structures, and  
 said storing comprises mapping the first data and the second data  
 to the intermediate format using one or more of the  
 common data type elements, and  
 provide the stored first data and second data to the [[a]] target system in a  
 target format.

25. **(Previously Presented)** The computer-readable storage medium of Claim 24,  
 wherein the common data type elements comprise one or more elements comprising:  
 an application element;  
 a fault handler input element;  
 a fault handler output element;

- a fault transformer input element;
- a fault transformer output element;
- a list of application instance element;
- a list of application type element;
- a list of ID cross-reference element;
- a list of ID cross-reference data element;
- a list of message definition element;
- a list of message text element;
- a list of value cross-reference element;
- a list of value cross-reference data element;
- a message element;
- a message set element;
- an activity type element;
- an address type element;
- an alternate ID type element;
- a communication data type element; and
- a data cleansing data type element.

26. (Previously Presented) The computer-readable storage medium of Claim 25, wherein the application element comprises one or more elements comprising:

- an application instance name element;
- an application type name element; and
- an application instance description element.

27. (Previously Presented) The computer-readable storage medium of Claim 25, wherein the fault handler input element comprises one or more elements or sub-elements comprising:

- an error type element;
- an error language element;
- an error severity element;
- an error flow name element;

- an error flow context element;
- a process name element;
- a message set element;
- a plurality of message text sub-elements; and
- a plurality of child message set sub-elements.

28. (Previously Presented) The computer-readable storage medium of Claim 25, wherein the fault handler output element comprises a message text element.

29. (Previously Presented) The computer-readable storage medium of Claim 25, wherein the fault transformer input element comprises one or more elements or sub-elements comprising:

- an error type element;
- an error language element;
- an error severity element;
- an error flow name element;
- an error flow context element;
- a process name element;
- a message set element;
- a plurality of message text sub-elements; and
- a plurality of child message set sub-elements.

30. (Previously Presented) The computer-readable storage medium of Claim 25, wherein the fault transformer output element comprises a message text element.

31. (Previously Presented) The computer-readable storage medium of Claim 25, wherein the list of application instance element comprises one or more elements or sub-elements comprising:

- a plurality of application instance definition elements;
- an application instance name sub-element;
- an application type name sub-element;
- an application instance description sub-element;

- a list of one-to-many ID cross-reference sub-element;
- a plurality of ID cross-reference sub-elements;
- an ID cross-reference name sub-element; and
- an ID cross-reference description sub-element.

32. (Previously Presented) The computer-readable storage medium of Claim 25, wherein the list of application type element comprises one or more elements or sub-elements comprising:

- a plurality of application type elements;
- an application type name sub-element; and
- an application type description sub-element.

33. (Previously Presented) The computer-readable storage medium of Claim 25, wherein the list of ID cross-reference element comprises one or more elements or sub-elements comprising:

- a plurality of ID cross-reference elements;
- an ID cross-reference name sub-element; and
- an ID cross-reference description sub-element.

34. (Previously Presented) The computer-readable storage medium of Claim 25, wherein the list of ID cross-reference data element comprises one or more elements or sub-elements comprising:

- a plurality of ID cross-reference elements;
- a plurality application instance sub-elements; and
- a plurality application ID sub-elements.

35. (Previously Presented) The computer-readable storage medium of Claim 25, wherein the list of message definition element comprises one or more elements or sub-elements comprising:

- a plurality of message definition elements;
- a message code sub-element;
- a message description sub-element;

a message corrective action sub-element; and  
a message argument name sub-element.

36. (Previously Presented) The computer-readable storage medium of Claim 25, wherein the list of message text element comprises a plurality of message text elements.

37. (Previously Presented) The computer-readable storage medium of Claim 25, wherein the list of value cross-reference element comprises one or more elements or sub-elements comprising:

a plurality of value cross-reference elements;  
a value cross-reference name sub-element; and  
a value cross-reference description sub-element.

38. (Previously Presented) The computer-readable storage medium of Claim 25, wherein the list of value cross-reference data element comprises one or more elements or sub-elements comprising:

a plurality of value cross-reference elements;  
a plurality application type sub-elements; and  
a plurality application value sub-elements.

39. (Previously Presented) The computer-readable storage medium of Claim 25, wherein the message set element comprises one or more elements or sub-elements comprising:  
a plurality of message text elements; and  
a plurality of child message set elements.

40. (Previously Presented) The computer-readable storage medium of Claim 25, wherein the activity type element comprises one or more elements or sub-elements comprising:  
an activity published code element;  
an activity comment element;  
an activity duration element;  
an activity end date element;  
an activity number element;

- an activity reason code element;
- an activity start date element;
- an activity task description element;
- an activity type code element;
- an activity planned duration sub-element;
- an activity actual duration sub-element;
- an activity actual date sub-element;
- an activity actual time sub-element;
- an activity planned date sub-element; and
- an activity planned time sub-element.

41. (Previously Presented) The computer-readable storage medium of Claim 25, wherein the address type element comprises one or more elements or sub-elements comprising:

- a plurality of address line elements;
- an address city element;
- an address state code element;
- an address county element;
- an address province element;
- an address country code element;
- an address house number element;
- an address house prefix element;
- an address house suffix element;
- an address postal code element;
- an address street direction element;
- an address street name element;
- an address street number element;
- an address street prefix number element;
- an address street prefix type element;
- an address street suffix element;
- an address thoroughfare element;
- an address list of location designator element;

- a plurality of address location designator sub-elements;
- an address location designator name sub-element; and
- an address location designator value sub-element.

42. (Previously Presented) The computer-readable storage medium of Claim 25, wherein the alternate ID type element comprises one or more elements comprising:

- an ID element; and
- an ID type element.

43. (Previously Presented) The computer-readable storage medium of Claim 25, wherein the communication data type element comprises one or more elements or sub-elements comprising:

- a list of phone number element;
- a list of email element;
- a list of web page element;
- a custom communication data element;
- a phone number sub-element;
- an email sub-element;
- a web page sub-element;
- a phone number area code sub-element;
- a phone number country code sub-element;
- a phone number full number sub-element;
- a phone number extension sub-element;
- a phone number international access code sub-element;
- a phone number number sub-element;
- a phone number type code sub-element;
- an email type sub-element;
- an email address sub-element;
- a web page type sub-element; and
- a web page address sub-element.

44. (Previously Presented) The computer-readable storage medium of Claim 25, wherein the data cleansing type element comprises a disable cleansing flag element.

45. (Canceled)
